<b><u>Chapter 08</u></b>	<b><u>Students Convergence Initiative for Holy Cause</u></b>

In this book there are about 8 chapters. This book is about the happening of the age that what is going on in the current era with the youth, what youth is doing by itself, what was the mission of youth and now what is it doing? What should be the mission of the youth ? How can youth recognize the mission? How can a mission be implemented? What should be the strategies to implement that Mission? How can the youth revitalize the ideological realms? How can Youth get the Conception, perception and preservation of Islamic bases or Islamic dogmatic Paradigms? How can youth take part in Innovative policies reformation? How can youth take part in nation building? How the scientific horizons Discovery and research Odyssey exploring pathways will be cleared to youth and when will the youth instead of indulging into intra-sect issues , will develop the sense of creative thinking that will be helpful for Islam Pakistan and nation in literature, science, technology and etc. When will the sacred places be not only emotionally sacred but the real hearts of the Muslim youth and will the youth call for these sacred places like Palestine? When will the youth accept Muslim Scientists trailblazers , & admire their efforts and will continue what their purpose was , like Dr Abdul Qadeer khan & Dr Afia Siddique? How will the young blood be purified and how will the young mind be cultivated and nurtured for the best holy purpose? How will Pakistan's ranking in research development grow? When will the students think not according to any slavery "ism" but according to the visionary thoughts given by Islam ? When will Nizam e Mustafa ﷺ be there ? How can Youth play its role in this system establishment? When will all the students Organizations instead of photos shooting work together on the holy agendas? How can we do all these things altogether? To answer this question there have been sketched the answers and flowcharts and strategies and plannings, the synchronization of which with altogether efforts is being named the prescient & Synergized Tactical Approaches book.

## " Visionary Mission Conception & Strategic Execution"

Now starting chapter one " Visionary Mission Conception & Strategic Execution" . In this chapter we have discussed 1. What is the definition of Mission? Mission Means the set of goals or objectives , and the achievements of which are the mere purpose of Muslim and if he fails during their achievement he will win so too as he considers his mission to be holy , related to islamic ascension. Now on the stage Today Youth is asking that " Should We do something for Islam Pakistan and nation"? This question is firstly arising in many few young minds , most of the minds remove this question because they have seen all the images of

the country that is happening around us , and the only way is to go away from this country and enjoy life. Other Young Minds still interrupted on this question may soon follow the former ones ! A very few after studying the situations from the very deep thoughts develop a Sense that yes! we should do something for Islam Pakistan and nation. The The sense that develops in them is due to their reading of Quran , Sunnah , Islamic literature and especially Allama Iqbal, who has clearly defined that in which situation Muslim were and now in which situation they are . One was the time it was zenith for them and now is the fall. The reason is just ignoring the deep understandings of the Quran and Sunnah. When they reach the point that now they should do something for Islam Pakistan and nation, at this peak there developed a mission of the youth . The mission thus is only to work for the Ascension of Islam and Galvanizing Muslim Ummah for Glory of Islam. Now there comes the techniques, strategies or tough planning for the implementation of the mission. Because there are so many issues for this implementation of holy mission. In the Islamic country there are non-Islamists on the top of the seat which will never allow the presence of Islam anywhere. So developing the techniques is the first thing after the locking of a mission. Now a number of strategies have to be made . We have to delve deeper , what is going on in a field work or any domain of study if I talk. There are 40-50 students in matric to fsc and 20 are toppers or thetas having the sub branches of professionals and book worms, other 30 becomes non-thetas being indulged into Study for pressure or just time pass. Who knows the mission? No on! Or least only 0.1% hardly ! Multiply this factor with the number of colleges in Pakistan, still there will be no number to consider the mission,if do then they will divide for fame or donations or their own dignities. No alliance, just formalities. If no, then there would be some change bro. How to Control these ones ? Have to pick the base ! Everything is destroyed from the base ! From the thinking being made ! Have to change the thinking from the base ! Thinking about what ? Donations? Those things which cannot be done? Or are these the formality implementation of which shows all the world to be done ? Come on! Be realistic! These are the statutes! Slavery thinking is the statute! Making education just for jobs and degrees is the statue! No creativity is the statue! No thinking is the statute! Liberal and secular minds are the Statues ! We have to break all these ones ! To break them we should have the best working agendas! The Strategies include: firstly, our interaction with the youth ! Interaction in broad scope! Their training sessions ! Their knowledge Session! Their creativity Session! Their interest sessions in science and research and technology! Their mission reformation Sessions ! But these things will not include anything against Islam ! When there is a statue, you have to break it with an axe, that axe is your strategy. The sharper the axe more easily will be that the statue to be broken, so sharper, long term methodologies will be strategies, more quickly will the Things happen to change. Now to these field domains we have to break the statutes of non-Islamic culture promotions, values, customs and beliefs and prevail only Islamism. We have to teach students by alliance the ideological realms and Paradigms of Islam , we have to tell students if you wanna be a Muslim you have to be committed and bonded with Islamic boundaries. We have to tell that what religion Islam is ? We have to tell that how the Islam in today's era Is being under attack by all the weak polars . The Question is how will we do so ! Just Go reading all the book and you will find the strategies and plans mentioned in the Next chapters in full details.

## **Revitalizing & Preserving Ideological Realms & Paradigms.**

What are basically ideological realms and Paradigms? Look Islam has sketched a boundary of all the bases and values , the perception and implementations upon which be called a Muslim (a true Muslims along with term of preservation, conception and preaching) . Now the values and beliefs and all the bases provided by Islam , just to recognize them as for the purpose of only prayer and for God is not good , this is what I will say the low thinking or slavery thinking result. All the Happenings being told in Quran , and whatever has been told on Quran is not for recitation and prayer purpose merely. The purpose includes thinking deep , understanding why Allah Did it , why is he calling me 5 times daily Infront of him. Why Allah is ordering to give Zakat , why Allah has ordered strict rules and regulations. By observing all these things

there will be a developing of deep thinking but that deep thinking must not be going to Atheism. All the understandings must be going to the results that must acknowledge Islam and somehow work like for the betterment of Islam. For example in today's era the youth has considered Islam as just a religion of prayers and nothing else , they are not willing to include Islam in their talkings! This thinking is supposed to be changed. Similarly Madaris are in a very huge number in Pakistan but the mere purpose of them is to just become molvi and take the charge of seat of mosque and preparing another mosques, just these are their goals . They will not stand for change of Nizam , they are not aware of where the youth is going , they are not concerned with problems the Islam is facing in modern era. They just have to fight the other sects in mosques and nothing else. When you have considered Islam merely this thing, how Islam will give you the insight to change the nizam. These things needed to be changed , the purpose should be the revitalizing the ideological realms. If I talk about the ideological realms boundary there comes a number of things. In today's era weak polars are trying to attract the Person who is Muslim, towards themselves and which are not the Islam and not even sect of Islam. They are just the rebellion group that has copied some values of Islam and with additional changes they are presenting themselves as Islam . There are so many other classifications of weak polars too. These types of weak polars try to destroy the Islamic heritage by wearing the Islamic attire in front and on the tongue. The Most popular among them are Qadianis, having the addition of their own so called prophet as last Prophet ( May Allah fall them Ameen). The Youth doesn't know what are the ideological realms and how a person is called a Muslim. To be a Muslim, how much context of the boundary is perceived and have absolute beliefs and then implemented from the core of heart. How can remain be aware of these weak polars? Students and youth must be told the weakness of these polars and propagandas they do, so that they must be aware of these illegals. Similarly the youth must have strong bonding with Islamic Heritages, customs & beliefs. This is not fair that after getting renowned or high ranked degrees we begin to say that there are no angels and Akhirah and no God. These misconceptions are produced when you have bonding with il-legals. In today's era one thing more making this bond weak is the group of YouTubers, who in harsh and controversial language always try to weaken this bond. Students must be trained about who is destroying the Islam and who is preserving it. When we will do so , there will be no one to call Islam mere the religion of prayers, when there will be strong bonding with Islamic realms then no one will move to atheism. When we will do so even the Madaris will wake up and begin to work for nizam . Thus, the sense of deep thinking, delve into the nature , Quran and Sunnah, Wondering all the Objectives given by Islam not just for merely prayers but for the establishment of nizam and Ascension of Islam , then we will be at way to building a Bright Islamic future and find our destination in this labyrinth too

## **Policies Paradigm: Inclusive & Innovative**

Look firstly what is politics? Politics in today's era is concerned by showing the green gardens or just telling the fake resources that will be provided by the politician if voters vote him and then in the end there will be black garden means nothing. This culture has been common since a very old era . But if we wanna learn the true meaning of politics? Instead of delving into large number of definitions from the books of political sciences , just bring the Khilafat Era Starting From Holy Prophet ﷺ & Ending to Hazrat Umar bin Abdul Aziz رضي الله عنه in front of you. What has been done ? Was there injustice? Inequality? Were women not given the rights ? Were there poor peoples not given the resources ? Were there so much protocol for the high authority including many examples. Instead of watching your political leader study the life of Hazrat Saeed Bin Amir رضي الله عنه Who was governor in the Khilafat of Hazrat Umar رضي الله عنه & People placed objections on him . When he was called by Hazrat Umar he came on foot so many miles away and appeared Infront of Khalifa . When all the objections were removed from him by telling the reality, then Hazrat Umar رضي الله عنه used to Pray that Allah Give him governor's like Hazrat Saeed Bin Amir رضي الله عنه. Unlike him, the political leaders of today playing the politics of seat and wealth only. These are the political leaders who do not implement Islamic laws and do not remove interest or Riba from the country and cannot raise their voice for Palestine. Shame on all ! Whenever you want to learn about the best examples of Political System and the implemented Islamic system that is only in Islam. Instead of

improvement, there exists the word of damaging only in the definition of politics nowadays. These things must be acknowledged. Youth must know that what is Islamic Political System , how it can be implemented. Alhamdulillah we have the complete honourable Political System in islam, where will be no injustice, no inequality, no dignities uncaring. There will be only the order by Allah and His Rasool ﷺ in Quran & Ahadees Sharif. What's Our duty then? Firstly after knowing this system we have to change the nizam ! We have to stand ! How ? Initially the big blame on Islamic political system being created is that these khalifa eras are too old and now we are living in a modern world and thus Islam is not compatible with today's modern era demand and does not have the properly implemented system . This is our duty , when we have attached a large number of youth with us , why don't we are studying the khalifat properly and Islamic political system with comparison to today's era , can't we develop the strategies of each & every domain like education, economics, health , infrastructure, banking, media and other fields! Yes we can do ! We can remove this big blame from us ! It is our duty to make the Youth so compatible that after studying ranking subjects they begin to make inclusive and innovative policies according to rules and regulations of islam of all the Modern equipped domains . When we will do so , when we will have the implementable structure of each and every domain , that is known in today's era with resources , better planning, future thoughts, according to modern mind you can change whatever you want. Thus the foremost duty is to make the best implementable strategies and thus lead the nation . This is necessity. But years are required for these betterments. In lieu of just photo shootings, seminars and webinars there must be well structured policies discussion sessions , and steps to put these strategies in front of the nation , all the political leaders and the government.

## **Exploring & Probing Scientific Horizons & Mysteries**

Youth Considers Science as superior to Islam in knowledge and vastness. Are there some people who say that Islam has emerged from Quran , they use non-logical reasoning concepts to clarify this concept. Similarly there are others who instead of being a great renowned scientist, always blame the religion due to science. And there are some who never took interest in what science is? and even if it has to do something with Islam or not. I will blame all ! Only telling the scientific benefits of ablution and miswak will not work now! Go further! This is just a very very zero percentage of work being done of science in relationships with Islam. Science has emerged from Quran and the things that Holy Quran Said 1400 years ago they are being discovered by Science today . Yes ! This thing is not shocking! This is good ! Because 1400 years ago there were no machinery, there were no scientific tools . All the modifications occurred step by step with the modern era. The thinking ability that was governed by Muslims were and are now being governed by Non Muslims. That thinking ability resulted in so many modern tools and equipments today we are seeing. Scientific Horizons! What do we mean by them ? All the Observations , experimentation, Conceptions & conclusion of all the things present around us ( the nature , the human, the animals, the plants etc ) with only one conclusion that is only Islam is the religion and only Allah is the God and Only Holy Prophet Muhammad ﷺ is the last Prophet of Allah and only Quran is the last holy book. Thus with such conclusion exploration, probing, navigating through all the sub branches of science are acceptable! Yes along with this spiritual conclusion there is also the materialistic conclusion that is development of new drugs to remove the disease, that is development of new aircrafts to destroy the Islamic enemies, that is the development of Wireless Internet system for better transmission, that is development of Less petrol consuming bikes and cars , that is using waste as a big source of energy that is developing of big solar plates and projects to supply the electricity, that is better machinery production for better economy. Who will say that don't do this ? No one bro! But when especially the traditional minds of right wing will see that youth is becoming atheist they will always ignore the science and will not delve deeper and will not appreciate the science. And when the left wing will see that the right wing is ignoring science and are not interested they will instead of delving themselves into science they will begin wasting their time on criticizing the right wing. This is happening today. There are many Scientific seminars with no conclusions , there are physics and chemistry studying students and thus working in the tire shops or in the call centers. Ok ! Let's discuss how we can do so ! Solution contains numbers of Steps. First step is to

classify the science into sub branches and then analyze that in which sub branch upto what extent the work has been done ? Then along with all the field logicals and professionals probing that what further better working can be done in each field and what has to be done in the fields not being touched. Calculating the required things for each field betterment , taking these steps initially. Let me add one point that has also been added to the beacon of hope series that was launched by KHREWS to Explore all the policies betterment for an Islamic state , the addition of scientific labs from the very base , addition of vast subjects of science from matric level like Aerobatics, bioenergetics, Environmental Chemistry, biophysics and other subjects instead of just being a topic in upper branch learnt for examination purpose. Conduction of physical seminars with altogether effort's for understanding the Quran as a source of Science and thus delving into the nature, the different sub branches separately to conclude the materialistic and spiritual conclusions. Conduction of different Islamic - Scientific Training Sessions and Fests , but with proper agenda not just one day Working principles. Starting everything as a project, with conclusions being written to achieve. If there occurs any scientific seminar then why does it occur? What conclusions have been eliminated! And the very next step must be the resulting more from the previous one. Our projects will be announced at the end of all these points.

## **Navigating A multifaceted Dimension of Research**

### **Odyssey**

Pakistan's ranking in research lines goes to 45-55th number with only 17000 research publications approximately with India on 9th number and china and USA on top with 3 lac+ publications. Research, if I say in Pakistan has become a necessary thing for degree completion which is treated mostly as formality. When we talk About research what do we mean by that ! The research is also a keen observation and practical experimentation of different selected topics. The Conclusion again resulting is spiritual and materialistic. Different difficult cases are solved when you delve into research. For example let us say that in any district of Pakistan there is a Disease being going in top let it be B . Now Research of this area will include water resources being used , the atmosphere being present, the food , the pollution, and survey from the peoples are professionals present at that place to conclude what are the causes of that Disease, how it emerged and how can it be minimized! just an example being given . I think , firstly the research project being initiated must be that the Quran is a Source of Science . A very good project that will shut up the mouths of liberals and seculars who say that Quran has nothing to do with science. Including in this another concerned point should be included regarding that Islam is full fledged implementable according to every era's system of each and every domain and field . This will be another shut up call to all. Now the research projects can be divided into number of boundaries. Including research in scientific sub branches topics especially the Darwin's Theory exploration. Is the Darwin right or wrong ! The conception must be cleared with our own research! Similarly the big band theory and all others. The issue is that when some researcher or scientists do the innovative thing and get the fame then the only thing left is to guilt that there is no God present. Special theory of relativity is a clear concept laying behind the Journey of Holy Prophet ﷺ being called Waqia Mairaj . Was it the duty of Einstein? Nope ! It was our duty ! Was he a Muslim and exploring about how the Waqia Mairaj occured ? Nope ! He did it by his own explorations! Now look here ! Einstein didn't know about Waqia Mairaj and more about Islam but after very hard struggling came to the point of special theory of relativity. If these points have been discussed by us and explored by us , would it take a long duration for us to develop this theory? Nope ! The issue is that our minds do not explore! This is needed ! Similarly By Quran as A source established, we will get new insights to science , we will get the new thoughts, Waqia of Ashab e Kahaf will prove another scientific insight and addition to scientific laws and theories. Try to understand, addition in science for spiritual and materialistic laws Development will be more fantastic if the Quran is a source or if the Quran is researched.

## **Reviving The Epistemological Contributions of Muslim**

### **Luminaries**

A number of Muslim Scientists are there. But instead of talking about their workings I will discuss only two scientists One is Dr Afia Siddique & the other is Dr Abdul Qadeer Khan. Why I have pointed to these two scientists. Both had the jihadi Concept of Islam for Pakistan, but what happened to both? One smuggled to America and sentenced to jail for 82 years and one isn't humiliated for developing an atom bomb. Both are the signs of the best modern scientists who studied the most and worked for Islam most . Dr Abdul Qadeer Khan made the atom bomb for Pakistan and removed the Qadianis Agenda of not fighting against enemies of Islam and he ruined all the wealth that Europe spent to make Pakistan a weak and compromised Muslim. Dr Afia Siddique wanted the youth of Pakistan to get out of slavery education and slavery thinking and being exploring the wonder of Islam , begin defending Islam in every aspect of life clearly and profoundly. And both with the holy mission weren't humiliated. What's the duty of us ? Take these causes ! Don't fear the results that what will happen with you , make your youth combination more and Strong, begin telling all the youth about the real Islam as both of these scientists did ! Just make clear the mission and begin working on it ! as you can imagine that Europe is good in every way, just Study what happened with Afia Siddique when he was under custody of the American army and what on a daily basis is done with Afia ? Abdul Qadeer was not allowed to interview on the seat that at last he interviewed on the street path. But after considering these examples, we must have the burning sensation in our hearts , that what has been done with the National Heroes and who are now made the national Heroes? Who just win the cricket match. This is the philosophical tradition of Pakistan. Our mission should include the objectives of these leaders they were taking and with full fledge preparations moving forward.

## **Nurturing & Empowering the Passionate Souls**

For all the agendas mentioned before, the necessary thing is the attraction of youth. Youth wants to know that where they are wrong , before they become the extremists in wrong ideologies, it is our duty to catch them towards the positive ideologies. In a college or university these things cannot be done at once that all youth to be guided towards the right path without any source . The first thing is the establishment of cabinets , the representatives and then their trainings , for what ? Tableegh ? Come on! The Tactics , the surreptitious tactics, with which the youth mind can be converted to positive debate and thus convincing to the right path . For example if there in any institute there is a issue of any non Islamic Culture promotions, then first thing is to protest? Nope! First thing is the professional meetup with logical and ground based Reasonings with the conducting parties and then the higher concerned authorities with powerful communication skills to stop that thing. These feature will always be admired . Similarly if there is any concert being happening in any institute or a any ism being promoted what to do ? The same procedure should be planted ! Why with any political or religious name ! No issue, Go with your name that your parents have named you! Our duty is the training, if communication skills and powerful debate qualities developing along with all the concerned logics and reasoning. Similarly to conduct an event that is purely for ascension of Islam or scientific Quranic Statement's knowledge or the points discussed former , every thing can be happened but with surreptitious tactics, how to take the criticism, how to tackle the angry power , rage power etc. These featured skills will allow us to achieve our Agendas . Also whenever we want to enter any institute or make any young to be the mission holder , his trainings regarding everything is necessary. He should never be blamed of what he is doing , keeping aside the blaming of those whose duty is to blame, who should never be the end of extremism, Be a good speaker with good behaviour and manners and a deep thinker for Islam Pakistan and nation for better scientific and Islamic Environment.

## **Students Convergence Initiative for Holy Cause**

Not only Students but also all the students organizations or any organizations having the same agendas as we discussed are invited to collaborate for this holy cause that is " Galvanizing the Pure Endeavors of Trailblazing Vanguard for islamic Ascension" . Instead of just Form filling agendas , coming to media

agendas & short outcomes. Let us unite for this Prestigious Holy Cause. When we will be just making the names of our own parties and presenting our concerned parties we will be taking only one sect or only one agenda , Till when our mission will be just as similar to shows and dramas with ending series and after a long time awakening series with short or vast periods of sleeping ? We don't allow doing it working on our agendas , we need to unite , I know no one will unite and this can never happen, because if it happens every name will disappear, only the name is Islam will remain which is not acceptable for Anyone. We need to think that today where we are standing in comparison to Europe. Today we should admire our destination? No where ! We are going nowhere ! We just have the funds ! We are just having the photo albums and we are just working on the agendas which are never going to be accomplished! Try to understand, where we are , where we have to go !

**#GETVIR\_by\_KHREWS**
